

NAME

ct - count and print results

SYNOPSIS

ct [*time*]

DESCRIPTION

The `ct` macro counts for *time*. If *time* is negative, counting is to monitor counts, otherwise *time* specifies seconds. If there is no argument, the count time is taken from the global symbol `COUNT`. If interrupted with `^C`, the counts accumulated to that time are shown.

EXAMPLE

```
ct 10
```

GLOBALS

`COUNT` - default counting time
