

NAME

ls - UNIX file listing

SYNOPSIS

```
ls [options] [files ... ]
```

DESCRIPTION

The `ls` macro executes the UNIX command `ls` in the current directory. Some of the more useful options to `ls` are:

- t Sort by last-modification time.
- u Sort by last-access time.
- r Reverse the sort order.
- R Recursively descend directories and list.

DEFINITION

```
def ls 'unix("ls $*")'
```

EXAMPLE

```
ls -tr do.*
```
