

NAME

qdo – execute a command file without echo

SYNOPSIS

```
qdo command_file
qdo .
```

DESCRIPTION

The qdo macro reads commands contained in the ASCII file *command_file*. Unlike the do macro, the commands from the file are not printed on the screen.

If the argument is a single dot (.), the previous command file is used.

The global variable DO_DIR may be set to the name of directory that will be searched for *command_file*, if *command_file* is not in the current directory.

EXAMPLE

```
do do.scans
```

GLOBAL VARIABLES

DOFILE – Last command file used.

DO_DIR – Name of private command file directory.

SEE ALSO

```
do startup vi
```
