

**NAME**

wm – print information about one or more motors

**SYNOPSIS**

```
wm motor [motor ... ]
```

**DESCRIPTION**

The `wm` (where motors) macro lists names, mnemonics, limits and current positions for each of the motors given as arguments. The arguments may be motor numbers or mnemonics.

**EXAMPLE**

```
wm 0 1 2 3 4 5  
wm tth th chi phi
```
